

Division of Plant Breeding Methodology

Here are the hyperlinks to jump to the further Divisions (Working Groups) within the Department of Crop Sciences

Here is the hyperlink to CiBreed

We are, depending on how you count, 15 team members.
Office is administrated by E. Kistner.

Division of Plant Breeding Methodology, October 2024

Technical Staff

Kaufmann, Dietrich*	26785	dkaufma@agr.uni-goettingen.de
Wiedenroth, Svenja	26785	svenja.wiedenroth@uni-goettingen.de
Yaman, Sonja	19739; 26785	sonja.yaman@uni-goettingen.de

Scientific Staff

Not yet identified		24369	Head of the Division
Link, Wolfgang	apl. Prof. Dr.	24353	wlink@gwdg.de
Zumbach, Birgit	Dr.	25764	birgit.zumbach@uni-goettingen.de
Kluth, Christian	Dr.	24360	ckluth@gwdg.de
Brünjes, Lisa	Dr.	24379	lbruenj@uni-goettingen.de

PhD Students

Aiyesa, Leke Victor	M.Sc.	24379	lekevictor.aiyesa@uni-goettingen.de
Laugel, Henri	M.Sc.	24355	henri.laugel@uni-goettingen.de
Osatohanmwun, Bright E.	M.Sc.	24355	bright.osatohanmwun@uni-goettingen.de
Tost, Mila	M.Sc.	24355	mila.tost@agr.uni-goettingen.de
Windhorst, Alex	M.Sc.	-	alex.windhorst@uni-goettingen.de
Azadeh, Hassanpour	M.Sc.	24355	azadeh.hassanpour@uni-goettingen.de
Quentin, Burandt	M.Sc.	24355	quentin.burandt@uni-goettingen.de

*D. Kaufmann, Senior Technician, is 50% 'here' and 50% in the Division of Crop Plant Genetics

This Division offers **modules** at **BSc level**, MSc level, PhD level.
For Agricultural Science, Crop Protection, integrated PAB, GFA.

Bachelor

- Pflanzenbau und Pflanzenzüchtung (Nr. 740372)
- Wissenschaftliches Arbeiten und professionelles Präsentieren in der Pflanzenproduktion (Nr. 740119)
- Experimentelle Pflanzenzüchtung (Nr. 740669)
- Spezielle Pflanzenzüchtung (Nr. 740161)
- Pflanzenbau, Pflanzenzüchtung und Graslandwirtschaft (Nr. 740969)
- Planung und Auswertung experimenteller Bachelor-Arbeit in Nutzpflanzenwissenschaften (Nr. 740949)
- Datenmanagement, Versuchsplanung und graphische Darstellung mit Excel (Nr. 740919)

The Division offers modules at BSc level, [MSc level](#), PhD level.
For Agricultural Science, Crop Protection, integrated PAB, GFA.

Master

- Genetische Grundlagen der Pflanzenzüchtung (Nr. 740053)
- Genome Analysis & Appl. of Markers in Plant Breeding (Nr. 740047)
- Plant Breeding Methodology and Genetic Resources (Nr. 740411)
- Quantitative Genetics and Population Genetics (Nr. 740856)
- Breeding Schemes and Programs in Plant and Animal Breeding (Nr. 740885)
- Journal Club: Evolutionary Genetics and Breeding (Nr. 740914)
- Selection Theory, Design and Optimisation of Breeding Programs (Nr. 740815)
- Planung und Auswertung experimenteller Master-Arbeit in Nutzpflanzenwissenschaften (Nr. 740948)
- Practical Statistics and Experimental Design in Agriculture (Nr. 740690)
- Methodisches Arbeiten: Versuchsplanung und –auswertung (Nr. 740023)

At BSc level, MSc level, **PhD level.**

PhD

➤ New Areas in Plant Breeding PhD (Nr. 740458)

We modernise the basic content of our plant breeding courses and prepare **online-compatibility** – still working on it.

Quentin Burandt: **Plant Breeding Basics**

Wolfgang Link: **Population & Quantitative Genetics & Plant Breeding Methodology**

Plant Breeding Basics

An ILIAS-based self-learning module; especially for those starting the iPAB program. If your BSc education in genetics and plant breeding has not well enough prepared you for the iPAB MSc program, then you **invest 5 -10 hours here and make up for what is missing.**

▶▶▶ Start in October 2024 😊

Plant Breeding: Population and Quantitative Genetics and Breeding Methodology

A sequence of $N > 32$ chapters (18-24 pages each), based on audio-enriched PowerPoint. A streamlined, coherent, compilation of two MSc modules (Nr. 740053, Nr. 740411)

> Plant Breeding Methodology

> Genetic Principles of Plant Breeding

We are involved in several projects, acquired by us (TB, WL, LB, QB) or in cooperation

N	Fund acquired by			Project conduct by			Scientist
	us	coope- ration	others	us	coope- ration	others	
2	+			+			HL,AW
3	+				+		VA,MT,BO
1		+		+			LB
1		+			+		QB
2			+		+		BZ
1			+			+	AH
$\Sigma=10$							

Research of Birgit Zumbach. These two projects belong to the Division of Crop Plant Genetics

Birgit Zumbach

- **Fungal disease resistance mapping exploring cross-kingdom: RNA interference in sugar beet (FUNBEET)**

→ Acquire fundamental understanding of pathogenic interactions between **fungi** and **crops** based on **transcriptome analysis**

Prepare joint **DFG** project application by the company Strube Research and the Division Crop Plant Genetics

EU-Project **CONSERWA** <https://conserwa.eu>

Evidence-based support for transition to agroecological weed management in different farming systems and European regions

→ Arrange group interviews/discussions with farmers and governmental advisors

Source: <https://www.strube.net/global/products/sugar-beet/cultivation-lexicon/diseases-and-pests/cercospora>

The DNPW budget for **PostDocs** is invested here to develop a **Competitive & Innovative Research Project**. Current target orientation:

- **Breeding Pea for Vegetarian/Vegan Human diets**
- Protein content, amino acid composition, mineral content

Lisa Brünjes

Pea-derived Protein Powder. ©Wikipedia

FABALOUS

Faba bean abiotic stress tolerance for improved yield stability

- BMBF (February 2025 - January /2029), a project on faba bean, *Vicia faba*
- Multiple stresses at phenotypic, molecular, metabolic levels
→ Drought, Heat, *Uromyces*, *Botrytis*
- 15 project partners (Coordinator: Schießl-Weidenweber, **Universität Giessen**)

Lisa Brünjes

Göttingen Work Packages

- Phenotyping stress response to heat & drought in rainout shelters; phenotypic data for systems biology and metabolomics
- Phenotyping pollen characteristics with **Impedance Flow Cytometry**
- Effects of abiotic stress on pollinator activity

TB: "Shorten maize breeding cycle by training GP model from phenotype data of **individuals** (instead of plot-based entries)"

<https://de.futuroprossimo.it>

www.inhpl.com

Shorten maize breeding cycle by **training GP model from phenotype data of individuals** (instead of plot-based entries).
 Prediction ability: Days to Anthesis (0.85), Grain Yield (0.50).
 Bayesian Ridge Regression gave the highest prediction ability.

Leke Victor Aiyesa

Modelling **non-additive** effects in genomic prediction using classical and machine learning methods. 1st supervisor: R. Sharifi

Improve the genomic prediction accuracy by combining modelling of **Additive** effects; **Dominance** effects; **Epistatic** effects

... using **locus-specific weighted dominance effect matrix transformation**

... using Genomic Best Linear Unbiased Prediction, Gradient-Boosted Decision Trees, and Convolutional Neural Networks.

MoBPSopti Project. Development of an optimization framework for complex breeding programs. Supervs: Simianer, Schlater, Rohde, Pook.

- Transform the breeding problem into an **optimization** challenge
- Employ **stochastic** simulation to model and **simulate** various breeding scenarios
- Reduce the stochasticity of target functions via **kernel regression**
- Optimize breeding program design using an **evolutionary algorithm**
- Building optimization framework *via* the **Snakemake workflow management system**

The project is [patent pending](#) under application numbers EP24164947.4 and EP24188636.5 with collaboration with BASF Belgium Coordination Center

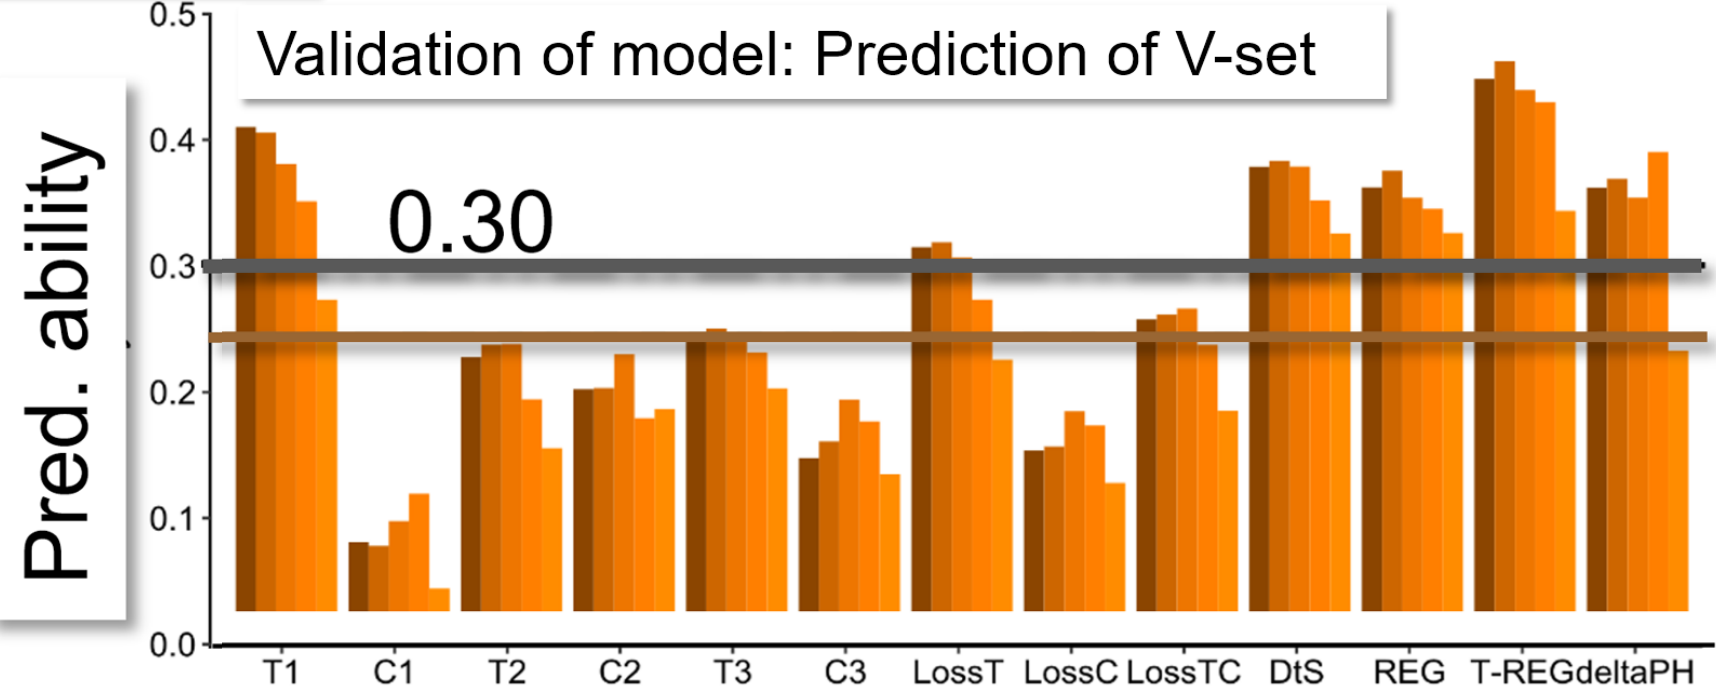

Azadeh Hassanpour

Faba bean. GWAS and GP of frost tolerance and winter hardiness, phenotyped in frost chamber (10-21 reps.) and field trials (E=22, 2005-2022)

GBLUP in R; rrBLUP package, G matrix VanRaden 2008.
Training set 185 inbred lines, Validation set 64 inbred lines.
Hard validation with 'other' genotypes in 'other' experiments

Vfaba_v2 Axiom
SNP array 60k

Dissertation project of Henri Laugel, 'Abo-Direkt'. Make use of *à priori* available inbred individuals in faba bean population instead of DH technology

- Identify highly homozygous individuals in populations *via* DNA-markers
- Estimate their GEBV for agronomic traits (model trained from historical data); select
- Propagate (*cage*) most promising inbred individuals to have seed for plot-based field test
- Field-test inbred lines as Polycross or Topcross progenies (~GVA)
- Predict synthetic cvs., field test most promising ones from ex-trial seed ...

So nice to see that the theoretical composition due to the partial allogamy is real!

of individuals with N=119

Quentin Burandt speaks today himself: Prospects for future European [Quinoa](#) breeding

One of the two plants is Quinoa
Chenopodium quinoa ;-)
